

Notes on Final Design

March 10th, 2006

- Weather
 - Change weather class - what is its functionality?
 - Change Weather Database query string to `time_t`.
 - Is Weather Database too complicated?
- Events
 - The Providence Phoenix is a good source for events too.
 - We should nail down which ones we plan on using soon.
- Misc.
 - Are we using daemons or are weather and events depending on the GUI and/or some timer?
- Docs
 - The user docs should be broken up more.
 - Add spring break to the schedule.
 - Break up tasks that are big blocks into smaller ones so that we can better determine our progress on any one task.
