CS1300: Designing, Developing, and Evaluating User Interfaces Collaboration Policy

IMPORTANT: Please read this document and sign below.

Most CS courses do not allow collaboration or discussion with other students about assignments. However, in this course we believe that discussing with fellow students will actually benefit you in understanding the material. The basics of the Brown University Academic Code still stand.

You are allowed to discuss problems with other students, and are also free to research topics and examples to enhance your understanding. Ultimately, however, you should come to your own conclusions for assignments, and what you hand in should be your own work.

We require you to acknowledge the student or any other sources that you use. You must quote and cite the source for any content you copy and paste from online. Failure to do so will be considered plagiarism.

For certain assignments you will be allowed to work in pairs or groups, but this will only be allowed if stated in the assignment.

If there is any confusion about the policy for this course, feel free to talk to Professor Huang, or a TA.

Signature

I fully understand, and agree to the collaboration policy outlined above for CS1300
