CSCI 1550/2450 Probabilistic Methods in Computer Science

Description:

CSCI 1550/2450 is a course on the mathematics that motivates, formulates, and explains many of the great successes of computing, including statistical machine learning, Monte Carlo methods, and modern cryptography. Probability, randomness, and statistics play a key role in these and almost any other modern computer science application. This course introduces the novel mathematical and computation methods that were developed at the interplay of probability and computing. Note: The course focuses on mathematical models, theorems and proofs, and leaves implementation and experiments to other courses.

Syllabus:

- Week 1: Randomized algorithms, review of relevant probability concepts
- Week 2-3: Basic concentration bounds (Chernoff and Hoeffding)
  - Applications: Set balancing, network packet routing, …
- Week 4: The occupancy problem
  - Hashing and random graphs
- Week 5: The Probabilistic Method – explicit constructions
- Week 7: Martingales and concentration bounds
- Week 6 - 9: Foundations of Machine Learning – Sample Complexity
  - PAC learning
  - VC-dimension
  - Rademacher complexity
- Week 10-11: Markov Chains and the Monte Carlo method
- Week 12-13: Rapidly mixing chains and the coupling method

Lectures: Tuesdays and Thursdays, 2:30 - 3:50 pm.

Instructor: Prof. Upfal (CIT 319) - eli@cs.brown.edu
Website: [http://cs.brown.edu/courses/cs155/home.html](http://cs.brown.edu/courses/cs155/home.html)

Check website for instructor’s and TA’s office hours, locations, and other practical information.

Course staff email: cs155tas@cs.brown.edu

Prerequisites: CS 145, AM 165 or equivalent.

Spring 2021: All classes, recitation sessions and TA hours will be on line, through Brown’s Zoom ([https://brown.zoom.us](https://brown.zoom.us)). The course will support both synchronous and asynchronous participation. Students are encouraged to attend and participate in lives classes. For students who cannot attend, all classes and recitation sessions will be recorded and available on Canvas ([https://canvas.brown.edu](https://canvas.brown.edu)). We will also schedule recitation sessions and TA hours to accommodate students in different time zones. More information will be available on the course web site [http://cs.brown.edu/courses/csci1550/](http://cs.brown.edu/courses/csci1550/).

Textbook:
The textbook for the course is Probability and Computing: Randomized Algorithms and Probabilistic Analysis by Michael Mitzenmacher and Eli Upfal

Assignments:
Weekly assignments (problem sets) are the major part of the class works. All assignments will be posted on the course website. Assignments will be handed in class, according to the instructions on the assignment.

Assignments must be typeset in Latex or written in a VERY clear handwriting. Answers must be concise and mathematically correct. No late homework will be accepted without prior authorization from the instructor.

Grading:
Course Grade = 0.4 * Final + 0.3 * Max[Midterm, Final] + 0.2 * Max[Hw, Final]

Hw = Average of the best 7 homework grades.

Collaboration policy:
Problem sets (except the midterm and final) are collaborative. You may discuss the problems with other students to get a general idea of how to solve them. However, the answers you turn in must be your own, not written in a group.

Time Requirements: Total time spent in and out of class for this course is estimated at ~180 hours. Students will spend 3 hours in class each week (a total of 39 hours). Although specific out-of-class time investments may vary for individual students, a reasonable estimate to support this course’s learning outcomes is 140 -150 total out-of class hours, or on average, 10 hours weekly over a 13-week term, in reviewing class material and answering the weekly problem sets, and 10-20 hours working on the take home final.

Accommodations: If you feel you have physical, psychological, or learning disabilities that could affect your performance in the course, we urge you to contact SEAS (https://www.brown.edu/campus-life/support/accessibility-services/). We will do whatever we can to support accommodations recommended by SEAS.

Please review the Brown University Academic Code:

Violations of the Academic Code will lead to strict disciplinary action as outlined in the Code. Misunderstanding of the Code will not be accepted as an excuse for dishonest work.
