Project 2: Meshes
Due date: 11:59 PM on Saturday, February 4
How to hand in: cs224_handin meshes

In this project you’ll do some more work with meshes, specifically, on tessellation. To complete the project, you should follow the specification on the website. Additionally, you must answer the following question:

- In this project, you write a function to convert an image to a heightmap. How would you convert a heightmap to an image? If you were to convert an image to a heightmap and back, would the new image be the identical to the old image? What if you did the reverse order? Note: you don’t need to actually implement this function.
