Academic Code

CSCI 2951-O: Foundations of Prescriptive Analytics

Please complete and return this form to the mailbox of Serdar Kadioglu (CIT 4th floor) before handing any solutions for the projects.

The following excerpt is based on “The Academic Code at Brown University”:

Academic achievement is ordinarily evaluated on the basis of work that a student produces independently. Infringement of the Academic Code entails penalties ranging from reprimand to suspension, dismissal or expulsion from the University. A student's name on any project is regarded as assurance that that exercise is the result of the student's own thoughts and study unless collaboration is authorized.

Cheating on projects can take at least the following forms: using another individual's solutions in one's place, to take an exercise in one's place; using unauthorized materials from which one gains unfair assistance; improper collaboration or unauthorized assistance.

Additionally, you must agree to the collaboration policy as described in the course missive to be graded on class projects. By signing this form, you are consenting to the collaboration policy described in the course missive for all graded work in CSCI 2951-O.

Finally, as a member of the Computer Science department, you are obligated to take steps to prevent others from reading any electronic copies maintained of your work. If you do not know how to do this, please see a TA before submitting this pledge.

I pledge to abide by the rules of the Brown academic code. I also pledge by the collaboration policy and to take the necessary precautions to prevent others from reading any stored copies of my work.
