Research

Overview Interdisciplinary research into robust and effective computer science and visualization tools to solve problems in biology, fluids, medical imaging, archaeology, geology, geography, and other disciplines. Collaborative work with colleagues in these areas guides the research and provides a mechanism for evaluating the usefulness and robustness of results.

Education Ph.D., Computer Science, California Institute of Technology, 1995.

Geometric Model Extraction from Magnetic Resonance Volume Data

1999 [Interdisciplinary Scientific Visualization \(CS295-5\)](#). I developed and taught this course for the first time this year. In it, students emulated the process of doing interdisciplinary research by applying for grants, having their proposals evaluated, implementing them, and presenting their work at a mock conference. The groups for each project were required to have participants from multiple disciplines, exposing them to many of the skills required for multi-disciplinary collaborative work. The class also experimented with using a Rhetoric and Writing Fellow to help students with communication skills.
