

CS-034
It's Magic ...

Thomas Doepner
Pascal Van Hentenryck

3/23/2005 CS-034: Lecture 8 (twd/pvh: 2005) 1

Storage

The diagram illustrates the memory layout with four segments:

- stack**: Local Variables (indicated by a downward arrow)
- dynamic**: *malloc* and *new* (indicated by an upward arrow)
- data**: everything else
- text**: Code

3/23/2005 CS-034: Lecture 8 (twd/pvh: 2005) 2

Global Variables

```

int data;

int main() {
    void sub();
    data = 6;
    sub();
    ...
    return 0;
}

void sub() {
    data++;
    printf("data = %d\n",
           data);
    ...
}

```

3/23/2005

CS-034: Lecture 8 (twd/pvh: 2005)

3

Separate Files

```

/* file x.c */

int data;

int main() {
    void sub();
    data = 6;
    sub();
    ...
    return 0;
}

/* file y.c */

extern int data;

void sub() {
    data++;
    printf("data = %d\n",
           data);
    ...
}

```

```
gcc -o prog x.c y.c
```

3/23/2005

CS-034: Lecture 8 (twd/pvh: 2005)

4

Really Separate Files

```

/* file x.c */
static int data = 6;

int main() {
    void sub();
    sub();
    printf("data = %d\n",
        data);
    ...
    return 0;
}

/* file y.c */
static int data = 3;

void sub() {
    data++;
    printf("data = %d\n",
        data);
    ...
}

```

3/23/2005

CS-034: Lecture 8 (twd/pvh: 2005)

5

Static Local Variables

```

int *sub1() {
    int var;
    ...
    return &var;
    /* amazingly illegal */
}

int *sub2() {
    static int var;
    ...
    return &var;
    /* (amazingly) legal */
}

```

3/23/2005

CS-034: Lecture 8 (twd/pvh: 2005)

6

Static Member Variables

```

class X {
public:
    X(int v) : var1(v) {}
    int val() {
        return var1 + var2;
    }
private:
    int var1;
    static int var2;
};

int X::var2 = 7;

int main() {
    X x(2);
    cout << x.val() << endl;
    return 0;
}

```

3/23/2005

CS-034: Lecture 8 (twd/pvh: 2005)

7

Static Member Functions

```

class X {
public:
    X(int v) : var1(v) {}
    int val() {
        return var1 + var2;
    }
    static int get() {
        return var2;
    }
private:
    int var1;
    static int var2;
};

int X::var2 = 7;

int main() {
    cout << X::val();

    X x(2);
    cout << x.val() << endl;
    return 0;
}

```

3/23/2005

CS-034: Lecture 8 (twd/pvh: 2005)

8

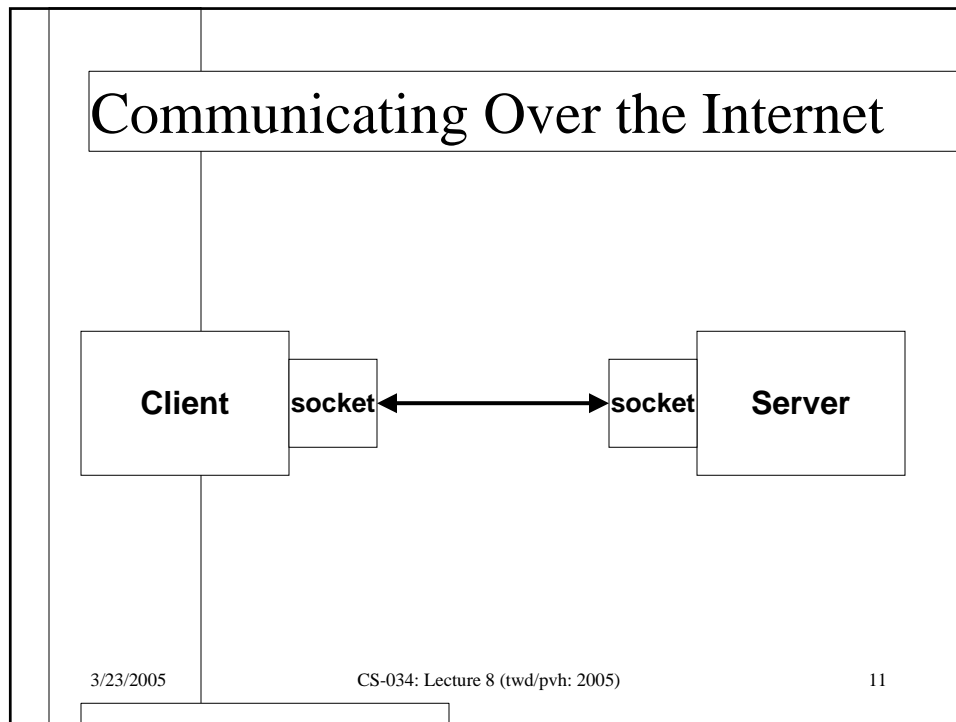

Pipe Code

```

int main( ) {
    int fd[2];
    pipe(fd);
    if (fork() == 0) {
        dup2(fd[0], 0);
        close(fd[0]);
        close(fd[1]);
        execlp("wc", "wc",
              "-l", 0);
    }
    if (fork() == 0) {
        dup2(fd[1], 0);
        close(fd[0]);
        close(fd[1]);
        execlp("ls", "ls",
              "-l", 0);
    }
    close(fd[0]);
    close(fd[1]);
    while (wait(0) >= 0)
        ;
}

```

3/23/2005 CS-034: Lecture 8 (twd/pvh: 2005) 10

- ## Steps ...
- | | |
|---|---|
| <ul style="list-style-type: none"> ● Client <ul style="list-style-type: none"> – create socket <ul style="list-style-type: none"> • <code>socket</code> – connect to server <ul style="list-style-type: none"> • <code>connect</code> – send message <ul style="list-style-type: none"> • <code>write</code> | <ul style="list-style-type: none"> ● Server <ul style="list-style-type: none"> – create socket <ul style="list-style-type: none"> • <code>socket</code> – set address <ul style="list-style-type: none"> • <code>bind</code> – wait for connection <ul style="list-style-type: none"> • <code>listen</code> – get connection <ul style="list-style-type: none"> • <code>accept</code> – get message <ul style="list-style-type: none"> • <code>read</code> |

- 3/23/2005 CS-034: Lecture 8 (twd/pvh: 2005) 12

Multithreaded Programming

- **Why?**

- many things are easier to do with threads
- some things run faster with threads

3/23/2005

CS-034: Lecture 8 (twd/pvh: 2005)

13

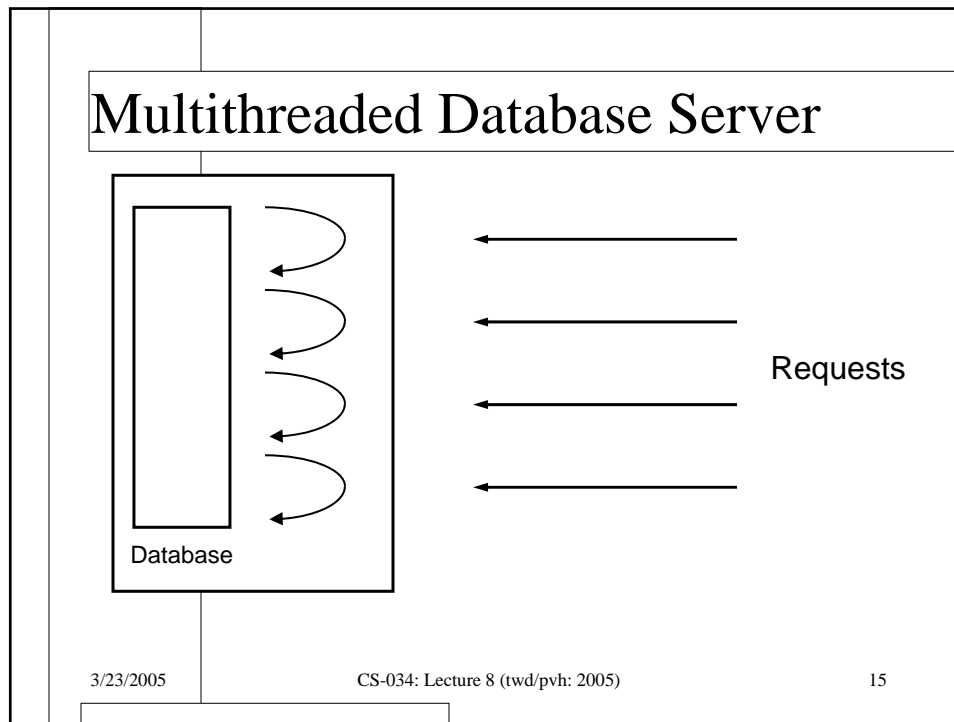

Single-Threaded Database Server

3/23/2005

CS-034: Lecture 8 (twd/pvh: 2005)

14

Creating a Thread

```

start_servers( ) {
    pthread_t thread;
    int i;
    for (i=0; i<nr_of_server_threads; i++)
        pthread_create(&thread,      // thread ID
                      0,             // default attributes
                      server,        // start routine
                      argument);     // argument
}

void *server(void *arg) {
    while(1) {
        /* get and handle request */
    }
}

```

3/23/2005 CS-034: Lecture 8 (twd/pvh: 2005) 16

Example (1)

```

#include <stdio.h>          main( ) {
#include <pthread.h>        int i;
                             pthread_t thr[M];
#define M 3                  int error;
#define N 4
#define P 5                  /* initialize the matrices
                             ... */

int A[M][N];
int B[N][P];                ...
int C[M][P];

void *matmult(void *);

```

3/23/2005

CS-034: Lecture 8 (twd/pvh: 2005)

17

Example (2)

```

for (i=0; i<M; i++) { // create the worker threads
    pthread_create(&thr[i], 0, matmult, (void *)i);
}
for (i=0; i<M; i++) // wait for workers to finish
    pthread_join(thr[i], 0)
/* print the results ... */
}

```

3/23/2005

CS-034: Lecture 8 (twd/pvh: 2005)

18

Example (3)

```
void *matmult(void *arg) {  
    int row = (int)arg;  
    int col;  
    int i;  
    int t;  
  
    for (col=0; col < P; col++) {  
        t = 0;  
        for (i=0; i<N; i++)  
            t += A[row][i] * B[i][col];  
        C[row][col] = t;  
    }  
    return(0);  
}
```

3/23/2005

CS-034: Lecture 8 (twd/pvh: 2005)

19

Compiling It

```
Linux% gcc -o mat mat.c -D_REENTRANT \  
-lpthread
```

3/23/2005

CS-034: Lecture 8 (twd/pvh: 2005)

20

Mutual Exclusion

3/23/2005

CS-034: Lecture 8 (twd/pvh: 2005)

21

Threads and Mutual Exclusion

Thread 1:

```
x = x+1;
/*
  ld  r1,x
  add r1,1
  st  r1,x
*/
```

Thread 2:

```
x = x+1;
/*
  ld  r1,x
  add r1,1
  st  r1,x
*/
```

3/23/2005

CS-034: Lecture 8 (twd/pvh: 2005)

22

Threads and Synchronization

```
pthread_mutex_t m =  
    PTHREAD_MUTEX_INITIALIZER;  
    // shared by both threads  
int x; // ditto  
  
pthread_mutex_lock(&m);  
  
x = x+1;  
  
pthread_mutex_unlock(&m);
```

3/23/2005

CS-034: Lecture 8 (twd/pvh: 2005)

23

Libraries

- **Collections of useful stuff**
- **Incorporate items into your program**
- **Replace existing items with new stuff**
- **Often ugly ...**

3/23/2005

CS-034: Lecture 8 (twd/pvh: 2005)

24

Creating a Library

```
% gcc -c sub1.c sub2.c sub3.c
% ls
sub1.c          sub2.c          sub3.c
sub1.o          sub2.o          sub3.o
% ar cr libpriv1.a sub1.o sub2.o sub3.o
% ar t libpriv1.a
sub1.o
sub2.o
sub3.o
%
```

3/23/2005

CS-034: Lecture 8 (twd/pvh: 2005)

25

Using a Library

```
% cat prog.c
int main() {
    sub1();
    sub2();
    sub3();
}
% cat sub1.c
void sub1() {
    puts("sub1");
}
% gcc -o prog prog.c -L. -lpriv1
```

Where does *puts* come from?

```
%gcc -o prog prog.c -L. \
-lpriv1 -L/lib -lc
```

3/23/2005

CS-034: Lecture 8 (twd/pvh: 2005)

26

Substitution

```
% ar t libmystdio.a  
puts.o  
% gcc -o prog prog.c -L. -lpriv1 -lmystdio  
%
```

3/23/2005

CS-034: Lecture 8 (twd/pvh: 2005)

27

Shared Libraries

3/23/2005

CS-034: Lecture 8 (twd/pvh: 2005)

28

Creating a Shared Library

```
% gcc -fpic -c libstdio.c
% ld -shared -soname libstdio.so.1 \
    -o libstdio.so.1
% gcc -o prog prog.c -L. -lpriv1 -lmystdio
```

3/23/2005

CS-034: Lecture 8 (twd/pvh: 2005)

29

Interpositioning

3/23/2005

CS-034: Lecture 8 (twd/pvh: 2005)

30

How To?

```
#include <dlfcn.h>

int puts(const char *s) {
    int (*pptr)(const char *);

    pptr = (int(*)())dlsym(RTLD_NEXT, "puts");

    write(2, "calling myputs: ", 16);
    return (*pptr)(s);
}
```

3/23/2005

CS-034: Lecture 8 (twd/pvh: 2005)

31

Compiling/Linking It

```
% gcc -fPIC -c myputs.c -D_GNU_SOURCE
% ld -shared -soname libmyputs.so.1 \
  -o libmyputs.so.1 myputs.o -ldl
% gcc -o tputs tputs.c ./libmyputs.so.1 \
  -Wl,-rpath .
```

3/23/2005

CS-034: Lecture 8 (twd/pvh: 2005)

32

What's Going On ...

- **gcc/ld**
 - **compiles code**
 - **does static linking**
 - searches list of libraries
 - adds references to shared objects
- **runtime**
 - **program invokes *ld.so* to finish linking**
 - searches list of shared objects
 - ***dlsym* invokes *ld.so* to do more linking**

3/23/2005

CS-034: Lecture 8 (twd/pvh: 2005)

33

Delayed Wrapping

- **LD_PRELOAD**
 - **environment variable checked by *ld.so***
 - **specifies additional shared objects to search (first) when program is started**

3/23/2005

CS-034: Lecture 8 (twd/pvh: 2005)

34

Example

```
% gcc -o tputs tputs.c
% ./tputs
This is a boring message.
% setenv LD_PRELOAD ./libmyputs.so.1
% ./tputs
calling myputs: This is a boring message.
%
```

3/23/2005

CS-034: Lecture 8 (twd/pvh: 2005)

35

Can We Do It With Printf?

- Takes variable number of arguments
- See “man stdarg” for details on handling such programs

```
#include <dlfcn.h>

int printf(const char *s, ...) {
    int (*pfptr)(const char *, ...);

    pfptr = (int(*)())dlsym(RTLD_NEXT, "printf");

    write(2, "calling myprintf: ", 18);
    return (*pfptr)(s, ???????);
}
```

3/23/2005

CS-034: Lecture 8 (twd/pvh: 2005)

36

Inline Assembler Code

```

#include <dlfcn.h>

int printf(const char *s, ...) {
    int (*pfptr)();

    pfptr = (int(*)())dlsym(RTLD_NEXT, "printf");
    write(2, "printf: ", 8);
    asm("movl -4(%ebp), %eax");
        /* save pfptr address */
    asm("leave");          /* pop off stack frame */
    asm("jmp *%eax");      /* jump to real printf */
    /* (*pfptr)(); */
    return 0;
}
    
```

3/23/2005 CS-034: Lecture 8 (twd/pvh: 2005) 38

Enough of Ugly ...

3/23/2005

CS-034: Lecture 8 (twd/pvh: 2005)

39
