

CSCI 1600: Real-time and Embedded Systems

Filip!

Ian!

Julian!

Milda!

Sahil!

Course staff

“

*Not counting laptops and
phones, estimate the number
of computers in this
classroom*

Class estimates/examples:

50? screen/speaker/project controllers

panel controller

smartwatches

fire alarm/sprinkler system

cameras

HVAC controllers

things hidden in the cart

possibly calculator

wifi router

“

*What are some other
examples of embedded
systems you can think of?*

Some examples

Images creative commons. For credits, see last slide

“

*How many different
embedded systems can you
think of that make up a car?*

Thomas Scannel, "Automotive Connectivity Evolves to Meet Demands for Speed & Bandwidth", 2017

Some products are made up of **distributed** embedded systems

*Choose a device we
mentioned.*

Discuss:

- *What is the device meant to do?*
- *What other devices does it communicate with?*
- *How does the device interface/interact with the outside world (sensors, buttons, displays)?*
- *What sorts of data does it process, and what computations does it have to do?*
- *Can it cause damage (to itself, its environment, people) if its software malfunctions?*

Embedded systems

Controlled by a **microcontroller**

CPU, memory, IO in one chip

Contrasted with *general-purpose computers*,

embedded systems:

- Are made for a specific purpose
- May be less “visible”
- Interface with the physical world
- Have timing constraints that affect correctness (**real-time systems**)

Challenges

Constraints

Memory space

Form factor

Power

No OS*/standard API or architecture

Engineering

Safety

Software/hardware design process

Cost at scale

Real-world interactions

Interface with peripherals

Peripheral failure

Communication protocols

Harsh environments

Verification & Validation

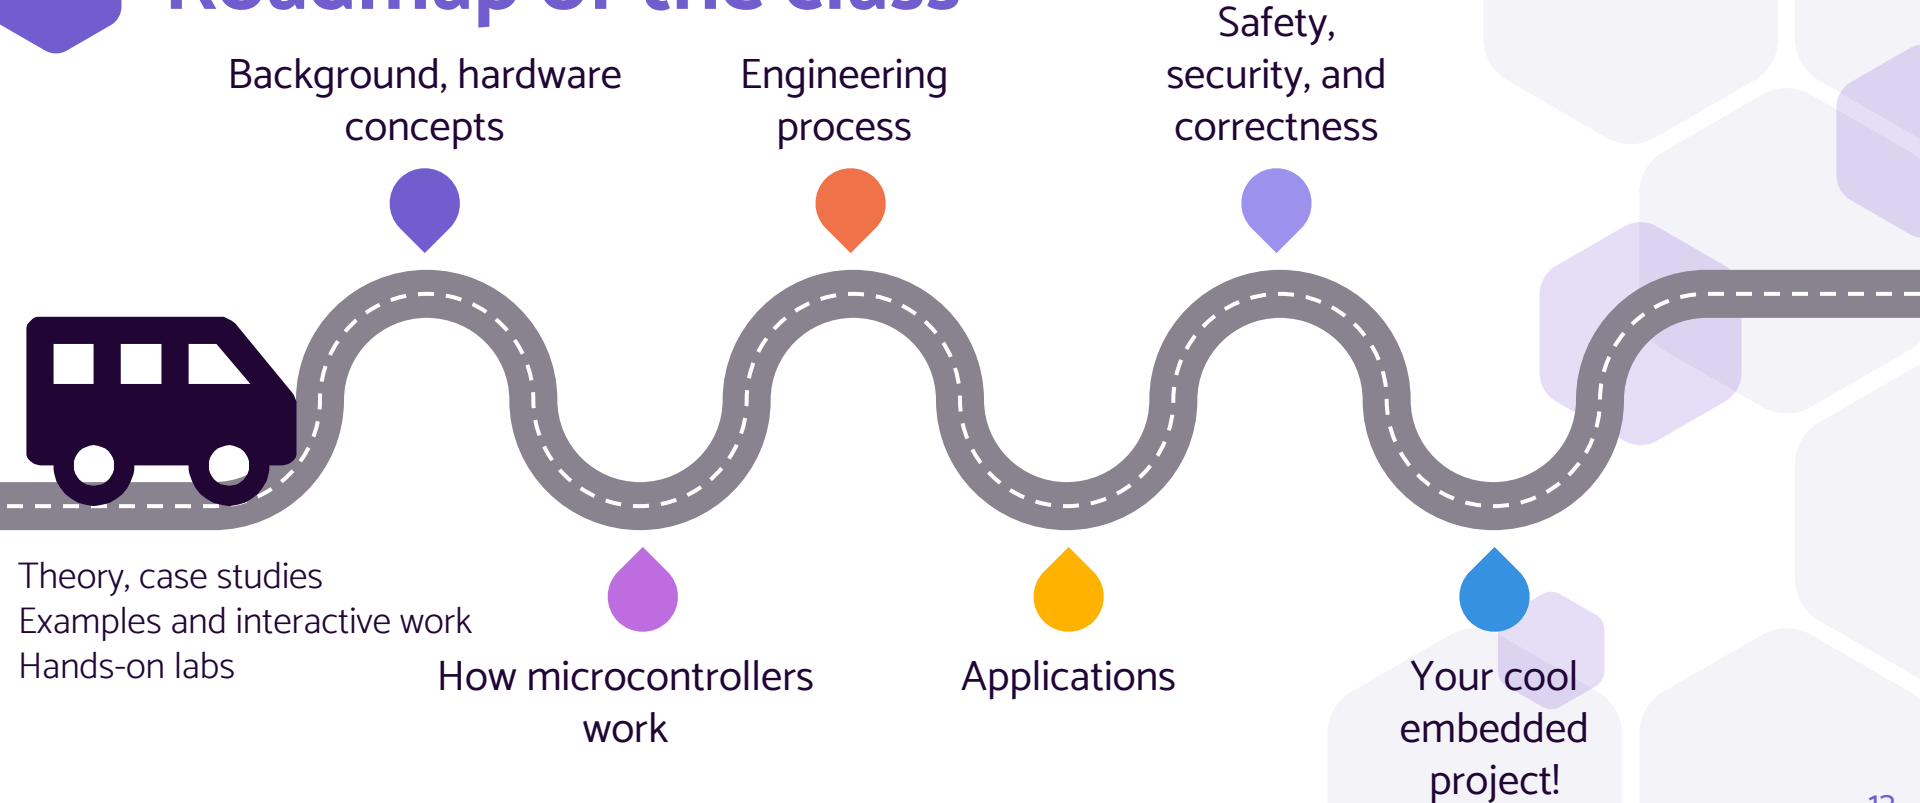

Timing analysis

Modeling physical properties

HW *and* SW testing and debugging

Roadmap of the class

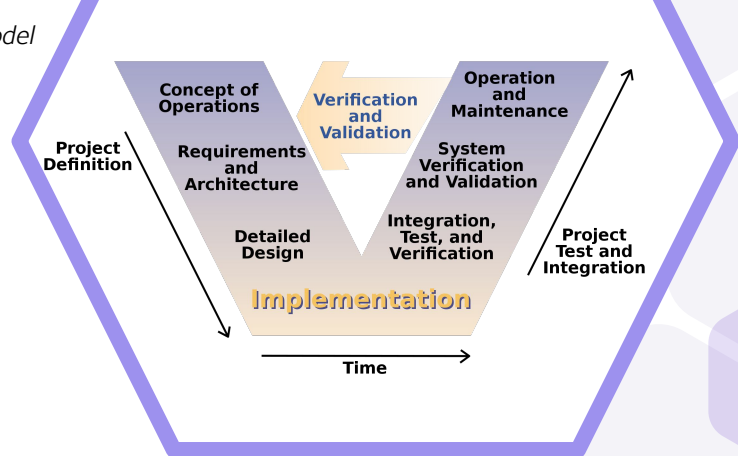

Throughout the class

How design, implementation, verification/validation connect

How HW influences SW and the other way around

Societal impacts of embedded technology

Summary

Embedded is everywhere

Embedded is cool!

Embedded has interesting challenges

Course structure

Homeworks

...prepare you for...

Concepts presented in lecture

...prepare you for...

Hands-on experience in lab

further assessed in
Group project

Music visualizer

Looping pedal

Drink mixer

Robotic timer

Incredible work on your projects, CS 1600! We want to brag about you!

- Arun, Jason, Stephen, and Prof. Zizyte

**Teaching
keyboard**

Laser tag

**Sapling Sprinter
game**

Egg scrambler

DE&I

Engineering involves working **with people** to create artifacts that will be used **by people**

Your work impacts others

Course has a major participation and teamwork component → inclusion and respect

I want to hear how I can do better, too

Ways you can give me feedback

E-mail

In person (after class, in office hours)

Anonymous form

Via TAs (anonymous or not)

DE&I, accessibility, culture issues: department
and university-wide resources

→ **Feedback only works if I follow up on it**
