

## Title: Responsive Redesign of Eastside Veterinary Clinic Website

Name: Maia Mongado

Faculty Sponsor: Jeff Huang

**Abstract:** The aim of this project was to redesign a website both so that it had better learnability, memorability, and usability, but also that so that it displayed well on different screen sizes. This involved combining both aesthetic design choice and technical coding choices to create a well laid-out, intuitive interface that users could easily navigate on different devices. For this project, I redesigned <https://www.eastsideveterinary.com/>, a local vet clinic's website. My deployed website is hosted at <https://maia-mongado.github.io/capstone/> on Github Pages. A deeper explanation of the background of the project and my design choices is located in the ReadMe for the Github repo at <https://github.com/maia-mongado/capstone>.
