

Title: Computer Systems Course Development

Abstract: I did course development for the intro systems course CSCI 1310. My faculty sponsor is the course's instructor, Malte Schwarzkopf. I wrote 1 project and 1 lab for the course. The project had students implement a Venmo-like server, teaching them about the principles of concurrency. The handout for the assignment is [here](#). The lab taught students about Protobuf and gRPC, 2 Google frameworks that make it easier to build clients and servers. The handout for the lab is [here](#).
